SKILLS

- **Languages:** Python, SQL, Java
- **Machine Learning & AI:** Scikit-learn, PyTorch, YOLO, TensorFlow, OpenCV, Prompt Injection, AI Red Teaming
- **Backend & Cloud:** Node.js, Express.js, React.js, FastAPI, PostgreSQL, AWS, Docker, Git, GitHub Actions (CI/CD)
- **Security & DevSecOps:** OWASP Top 10 (Web & LLM), Burp Suite, ZAP, Bandit (SAST), JWT Authentication

EXPERIENCE

- AI Application Security Engineer Trainee — Accenture** May'26 – Aug'26
- Architected and secured an enterprise Generative AI application (Qwen2 LLM), engineering a multi-layered Python defense gateway to mitigate prompt injection and credential leakage.
 - Designed DevSecOps CI/CD pipelines via GitHub Actions, integrating Bandit (SAST) and Gitleaks to enforce automated security gates for machine learning infrastructure.
 - Conducted adversarial AI red teaming and end-to-end API vulnerability assessments using Burp Suite and OWASP ZAP to patch backend execution flaws.

PROJECTS

- Smart Adaptive Traffic Signal Management System using Computer Vision and AI** Dec'25 – Apr'26
- Engineered a PyTorch Deep Q-Network (DQN) reinforcement learning agent to dynamically optimize traffic signal phases, reducing average vehicle wait time by 35% and increasing throughput by 22%.
 - Developed a real-time YOLOv8n and OpenCV computer vision pipeline, employing homography matrix transformations to calculate real-world queue lengths from pixel space.
 - Deployed the inference engine via an asynchronous FastAPI backend, PostgreSQL, and Docker, maintaining sub-100 millisecond action inference latency.
 - GitHub Repository: [Smart Adaptive Traffic Signal Management](#)
- Movify: AI-Powered Full-Stack Movie Platform** Jun'25 – Aug'25
- Engineered a scalable RESTful API using Node.js and Express.js to manage user authentication, movie data, and CRUD operations for reviews.
 - Integrated a Large Language Model (LLM) to power intelligent features, including a personalized recommendation engine and automatic review summarization.
 - GitHub Repository: [Movify](#)
- Ship Detection in Satellite Imagery Using Deep Learning** Mar'25 – Apr'25
- Developed a YOLOv3 Convolutional Neural Network (CNN) for high-accuracy ship localization, implementing complex image normalization and bounding box extraction pipelines.
 - Achieved ~95% training accuracy and ~92% validation accuracy on maritime satellite imagery datasets.
 - GitHub Repository: [Ship Detection in Satellite Imagery](#)

CERTIFICATES & TRAINING

- AI Application Security & DevSecOps (360-Hour Corporate Training) August 2026
- Enterprise Technical Foundations (Accenture / Tekstac) July 2026
- Machine Learning Specialization by Stanford| Online and DeepLearning.AI July 2025
- Google Cybersecurity (Google) August 2022

EDUCATION

- **Lovely Professional University** Phagwara, Punjab
Bachelor of Technology - Computer Science and Engineering; CGPA: 7.23 October 2022 – June 2026
- **Narayana Junior College** Hyderabad, Telangana
Intermediate; Percentage: 78.9% June 2020 - May 2022
- **Sri Chaitanya Techno School** Hyderabad, Telangana
Matriculation; Percentage: 100% June 2019 - March 2020
